Brainstorming and Ideation Phase – FitBuddy

The **Brainstorming and Ideation Phase** focuses on identifying the main problem, understanding user needs, and generating ideas for an AI-based fitness solution.

1. **Identify the Problem**
    - Many users find it difficult to create a personalized workout routine.
    - Generic workout plans may not match an individual's fitness goal, experience, or preferred intensity.
    - Users also need simple nutrition and recovery guidance.
2. **Generate the Core Idea**
    - Develop **FitBuddy**, a web-based AI fitness assistant.
    - The system uses user details such as **age, weight, fitness goal, and workout intensity** to generate a personalized **7-day workout plan**.
3. **AI-Based Personalization**
    - Use **Gemini 1.5 Pro** for structured workout-plan generation and feedback-based plan updates.
    - Use **Gemini Flash** for quick nutrition and recovery tips.
4. **Feedback and Improvement**
    - Allow users to provide feedback such as **"Add yoga"** or **"Include more cardio."**
    - The AI uses the original plan and feedback to generate an updated plan.
5. **Supporting Features**
    - Store user information and workout plans using **SQLite and SQLAlchemy**.
    - Provide an admin view to see users and their original/updated plans.
6. **Final Ideation**
    - The idea developed into a complete **AI-powered fitness planning web application** using **FastAPI, Gemini, Jinja2, SQLite, and SQLAlchemy**, with personalized plans, nutrition tips, feedback-based updates, and an admin dashboard.
