Member 4:Malai raja A ,NMID:7255103A926613882F2472E0E276D163

Project Demonstration Phase – FitBuddy

The **Project Demonstration Phase** focuses on demonstrating the working features of the FitBuddy – AI Fitness Plan Generator and showing how the system operates from user input to personalized fitness-plan generation.

1. Demonstrate the Home Page

- Open the FitBuddy application in a web browser.
- Enter the required details:
    - Name
    - User ID
    - Age
    - Weight
    - Fitness Goal
    - Workout Intensity
- Click **"Generate Plan"** to submit the information.

2. Demonstrate Personalized Workout Generation

- The submitted information is processed by the FastAPI backend.
- Gemini 1.5 Pro generates a personalized **7-day workout plan**.
- The plan contains day-wise exercises, sets/repetitions or duration, rest intervals, and basic warm-up/cool-down guidance.

3. Demonstrate Nutrition/Recovery Tip

- Gemini Flash generates a concise nutrition or recovery recommendation.
- The tip is displayed along with the workout plan and is related to the user's selected fitness goal.

4. Demonstrate Feedback-Based Updating

- Enter the user's ID and provide feedback about the existing plan.

- Example feedback can include **“Add yoga”** or **“Include more cardio.”**
- The system sends the original plan and feedback to Gemini 1.5 Pro.
- An updated workout plan is generated and stored.

5. Demonstrate Database Storage

- Show that user information and generated plans are stored in the SQLite database.
- Demonstrate that both the **original and updated plans** can be maintained.

6. Demonstrate Admin Dashboard

- Open the **View All Users** page.
- Demonstrate the display of registered users, their fitness information, and original/updated workout plans.
- This provides administrators with an overview of the stored fitness data.

7. Demonstrate API Functionality

The main routes demonstrated are:

Home → Generate Workout → Submit Feedback → View All Users

FastAPI's `/docs` page can also be demonstrated for testing and exploring the application's API endpoints.

8. Demonstration Outcome

The demonstration shows the complete FitBuddy workflow:

User Details → AI Workout Plan → Nutrition Tip → User Feedback → Updated Plan → Database → Admin Dashboard

This demonstrates how FitBuddy provides a personalized and adaptable fitness-planning experience using Gemini AI, FastAPI, Jinja2, and SQLite.

Continue presenting FitBuddy

- Prepare FitBuddy presentation slides
- Create a FitBuddy demo script
